

AMENDMENTS TO THE SPECIFICATION

On page 86 of the Specification, please amend the Abstract as follows:

-- Methods and/or systems relating to mote networks having one or more indexes. In some implementations, for example, one or more first-administered content indexes are created for a first set of motes, and one or more second-administered content indexes are created for a second set of motes. A federated index is then created from at least a part of the one or more first-administered content indexes and at least a part of the one or more second-administered content indexes. --
